

AMENDMENTS TO THE SPECIFICATION:

Page 15, replace the paragraph, beginning on line 6, with the following amended paragraph:

--As shown in figure 14A, the future "small card [[102]] 103" is manufactured within a larger base card 110, for example in format CR80, by appropriately combining an antenna and a microcircuit. This makes it possible to take best advantage of methods of standard manufacture, and personalization of microcircuit cards (stamping, cutting out or presplitting, sublimation or inkjet printing, laser engraving, etc.). This personalization may concern not only the microcircuit but also the rest of the base card in order to print on it commercial messages, logos, or even features of the final user.--

Page 15, replace the paragraph, beginning on line 14, with the following amended paragraph:

--Presplitting in practice performed in anticipation of a future detachment of the small card 103 from the rest of the base card 110.--

Page 15, replace the paragraph, beginning on line 16, with the following amended paragraph:

--In principle, after personalisation, the final user introduces the detachment of that small card [[102]] 103 and engages it in the base 102 (see Figure 14B).--

Page 15, replace the paragraph, beginning on line 31, with the following amended paragraph:

--In a variant not shown, the small card $[[102]]$ 103 is engaged in a base provided with a cavity opening by a face.--
